

## Calling Line ID Delivery-External Calling Line ID Delivery

### Description

Allows the user to view the incoming Caller ID information for a call coming from outside the customer's organisation.

### Function

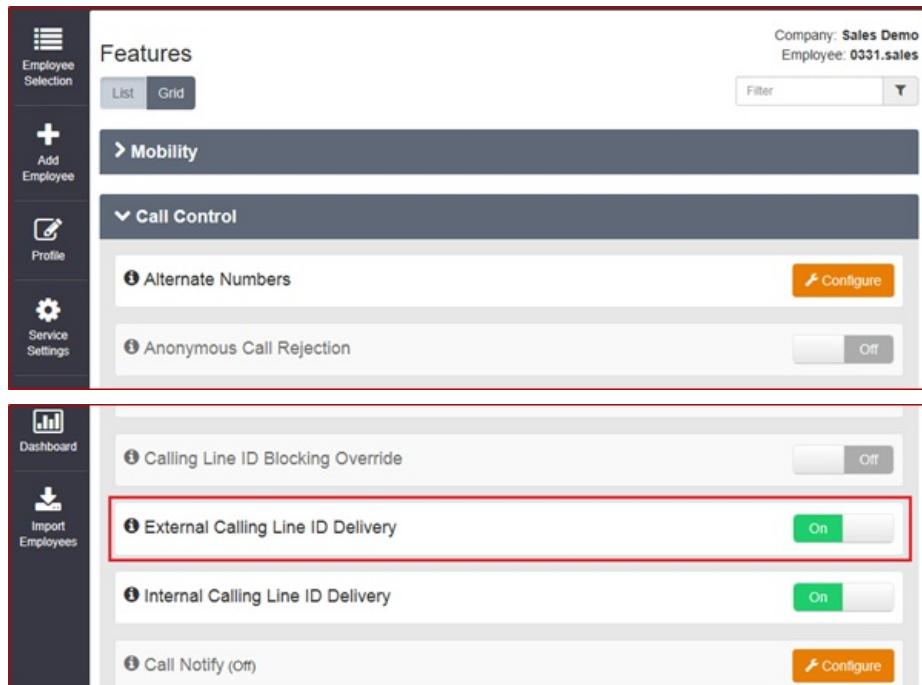

To control whether the user is presented with the Calling Line Information, Number and Name, where available, for incoming calls that have originated outside the customer's organisation.

For SIPT users this can be used for inbound calls delivered from the PSTN although the PBX could override it. The feature is dependent on the PBX being used and whether or not it can be configured to support the feature.

### Configuration/Function

In the Business Portal, navigate to:

- Employees > Features > Call Control
- Scroll down to External Calling Line ID Delivery

The screenshot shows the Business Portal interface. On the left, there is a sidebar with icons for Employee Selection, Add Employee, Profile, and Service Settings. The main area is titled 'Features' and shows 'Call Control' is expanded. Under 'Call Control', there are two sections: 'Alternate Numbers' (with a 'Configure' button) and 'Anonymous Call Rejection' (with a slider switch set to 'Off'). Below this, there is a section for 'Calling Line ID Blocking Override' (slider switch set to 'Off'). The 'External Calling Line ID Delivery' section is highlighted with a red box and has a slider switch set to 'On'. Other options in this section are 'Internal Calling Line ID Delivery' (set to 'On') and 'Call Notify (off)' (with a 'Configure' button).

- Move the Slider Switch to toggle the setting On or Off.
