Configuring Polycom Soundstation conference phones - Media Manager

Article Number: 70 | Rating: 4/5 from 1 votes | Last Updated: Sun, Jul 30, 2017 at 9:11 AM

The easiest method of configuring the ip6000 / ip7000 conference phones is using the phone interface rather than the phones web interface.

Once the phone has finished booting up, press the menu button, and then select:

settings > advanced

The default password is "456", after which press the enter softkey.

Then select:

admin settings > sip configuration

enter the following information in the subsections:

server

address: ip.of.media.manager

port: 5060 transport: naptr

outbound proxy

address: ip.of.media.manager

port: 5060 transport: naptr

line 1

display name:

address:

label:

name of extension user

extension number

name of extension user

third party name: extension auth user id: extension

auth password: extension password

Then exit this menu, and save the config.

This will restart the phone, which should then register.
