

The easiest method of configuring the ip6000 / ip7000 conference phones is using the phone interface rather than the phones web interface.

Once the phone has finished booting up, press the menu button, and then select:

settings > advanced

*The default password is "456", after which press the enter softkey.*

Then select:

admin settings > sip configuration

enter the following information in the subsections:

### server

address: ip.of.media.manager  
port: 5060  
transport: naptr

### outbound proxy

address: ip.of.media.manager  
port: 5060  
transport: naptr

### line 1

display name: name of extension user  
address: extension number  
label: name of extension user  
third party name: extension  
auth user id: extension  
auth password: extension password

Then exit this menu, and save the config.

This will restart the phone, which should then register.
